

AKDENİZ UNIVERSITY
COMPUTER ENGINEERING DEPARTMENT
SENIOR PROJECT MEETING RECORD #1

Project Title: NutriScan — Evidence-based health condition and food ingredient matching

1. Work done since the last meeting (first meeting, 02.10.2026):
 - a. Presented the initial concept (household meal and shopping planning assistant), an interactive prototype and the team setup (repository, task board, backend skeleton).
 - b. Presented a literature-based approach to health condition–ingredient matching with candidate sources: FooDB, JECFA, CTD; SapBERT for term matching, Qdrant for vector search.
 - c. Feedback: the planning-assistant scope is not distinct enough and would reduce to scanning a product and seeing a result; the project is re-scoped.
 - d. New core: evidence-based health condition–ingredient matching, communicated to users correctly and with its uncertainty.
 - e. Barcode scanning is dropped: the ingredient list is read with OCR and matched against the evidence to decide whether the product suits the user.
 - f. The approach must be literature-backed, defensible and novel compared with existing products.
2. Work to be done until the next meeting (09.10.2026):
 - a. Competitor analysis: five closest products/studies; verify none performs condition–ingredient matching (Levent).
 - b. Condition list and literature basis from the referenced sources (Ozan).
 - c. Excel dataset: linked sheets for conditions, ingredients and evidence-based relationships with Turkish/scientific names, label aliases, evidence type, citation and curation status (Hilal: evidence and source verification; Levent: integration).
 - d. Turkish translation of terms; uncertain links flagged for supervisor review.
 - e. Revised project definition (problem, approach, literature basis, scope).

Group Members:

Student ID	Name Surname	Attendance	Signature
20220808045	Levent Can Ceylan	Present	
20210808005	Şükran Hilal Hoccoğlu	Present	
20220808007	Ozan Karadaş	Present	

Advisor: Res. Asst. Dr. Taha Yiğit Alkan
